DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-17, drawn to a method and apparatus for forming a resistive film on a surface of a sample comprising the steps of: dropping a liquid film material on the sample surface while the sample is being rotated to form a resistive film thereon, and dropping a solvent which solves the resistive film formed on the sample surface while the sample is being rotated at a rotational speed, thereby dissolving a part of the resistive film to obtain the resistive film having a desired level of thickness; are classified in Class 118, subclasses 667 and 679.

II. Claims 18-32, drawn to a mechanism for inspecting a surface of a sample, comprising: an electromagnetic wave irradiation apparatus comprising an electromagnetic wave source, a device for guiding an electromagnetic wave generated from the electromagnetic wave source onto a sample surface, and a detector for detecting electrons emitted from the sample surface which is irradiated with the electromagnetic wave to output an electric or optical signal; are classified in Class 250, subclasses 310 and 492.1.

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are: Inventions I is involved with the method and apparatus for forming a resistive film on a surface of a sample, while Inventions II details a method for inspecting a surface of a sample using an electromagnetic wave irradiation.

Art Unit: 2881

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
